

User Acceptability Testing

Tester Name: ZOE R 

Application Name: Hugh M

Test	Describe the feature being tested	Describe the user input or test data	Describe the pass criteria	Test & Observations Include any user feedback that occurred
1	Menu loads		User is offered a menu 1. Login 2. Register 3. Quit	<input checked="" type="checkbox"/> PASS <input type="checkbox"/> FAIL Observations:
2	Login script loop	Enter "Sith" at login	The user should be re-prompted for a menu choice	<input type="checkbox"/> PASS <input checked="" type="checkbox"/> FAIL Observations:
3	Quit menu item	Choose the quit menu item	The application should quit and return to the bash command prompt	<input checked="" type="checkbox"/> PASS <input type="checkbox"/> FAIL Observations:
4	Incorrect password	Username: "grog" Password: "1234"	The user should be re-prompted for a correct login	<input type="checkbox"/> PASS <input checked="" type="checkbox"/> FAIL Observations:
5	Incorrect username	Username: "Grog" Password: "patu"	The user should be re-prompted for a correct login	<input checked="" type="checkbox"/> PASS <input type="checkbox"/> FAIL Observations: Also returned incorrect for the correct username
6	Incorrect combination	Username: "Grog" Password: "Yoda"	The user should be re-prompted for a correct login	<input type="checkbox"/> PASS <input checked="" type="checkbox"/> FAIL Observations: Couldn't actually test this one properly
7	Login success	Choose login menu item Username: "grog" Password: "patu"	The menu is updated to: - Change password - Logout	<input type="checkbox"/> PASS <input checked="" type="checkbox"/> FAIL Observations: Same as the last one
8	Password character requirements	Choose change password option Change password to "YOD"	The user should be prompted for a minimum of 4-letter password	<input type="checkbox"/> PASS <input checked="" type="checkbox"/> FAIL Observations:

9	Change password	Choose change password option Change password to "YODA"	The user should return to the main menu	<input type="checkbox"/> PASS <input checked="" type="checkbox"/> FAIL Observations: I feel like these would all work if the username did ^{thing} did
8	Logout	Return to main menu Choose logout	The application should quit and return to the bash command prompt	<input type="checkbox"/> PASS <input checked="" type="checkbox"/> FAIL Observations:
9	Login with new login details	Choose login menu item Username: "grogu" Password: "YODA"	The menu is updated to: - Change password - Logout	Tester name: <input type="checkbox"/> PASS <input checked="" type="checkbox"/> FAIL Observations:
10	Register user	Select 'register user' option Create user newuser/myPassword	User is	Tester name: <input type="checkbox"/> PASS <input checked="" type="checkbox"/> FAIL Observations: error shows what I assume is a runtime error
11	Text file is update	Access the *.csv *.txt file containing credentials	Confirm password change is in file Confirm new user is in file	Tester name: <input type="checkbox"/> PASS <input checked="" type="checkbox"/> FAIL Observations:

Other observed notes:

Most of these fails were because of one bug (coding moment)
the code does look like it works for everything else though.
